Phone: +91 9620325159

Staff-level Product Designer and AI Product Builder with 7+ years leading enterprise UX strategy, scalable design systems, and full-stack product delivery across B2B SaaS, InsurTech, IoT, and E-commerce. Operates as both a strategic design leader and a hands-on builder — architecting multi-LOB design systems, running client-facing service design, and independently shipping production-grade applications from zero to live. Bridges complex enterprise problems and high velocity execution by combining deep UX craft with AI-native development fluency.

MY CORE EXPERTIES

- Enterprise UX Strategy
- AI-Native Product Design
- Scalable Design Systems
- Service Design
- Product Discovery & Validation
- Information Architecture
- Cross-functional Governance
- UX Leadership & Mentoring
- Stakeholder Management
- DesignOps & Process Design
- Rapid Prototyping
- Growth Design
- Founder-Led Execution

AI & TECH STACK

AI & Automation:

- Prompt Engineering
- AI Workflow Design
- Claude / GPT-4

Design & Prototyping:

- Figma (Advanced)
- Interaction Design
- Rapid Prototyping
- Design Systems

Build & Deploy:

- Lovable (AI Dev)
- Supabase
- Vercel

Strategy & Methods:

- Zero to One
- Agile / Scrum
- Jobs-to-be-Done
- Stakeholder Alignment

PROFESSIONAL EXPERIENCE

Staff UX Designer @ Concirrus

Jul 2023 – Present

Leading full-stack design strategy for an AI-native specialty insurance platform — owning product architecture, DesignOps governance, cross-LOB scalability, and end-to-end client engagement from discovery through live release.

- **Lead a team of 3 designers** building AI-native underwriting platforms across Marine, Aviation, Cargo, and Construction Lines of Business
- Operate as the **senior design voice in Product Leadership** — owning product structure, roadmap alignment, and design strategy from concept through engineering delivery and pre-release validation
- Drive **direct client and end-user engagement** across the full service design arc — requirements gathering, product ideation, usability testing, and post-delivery feedback sessions
- Define and govern **design process and team operating structure** — authoring working plans, securing Product Leadership sign-off, and supervising cross-team execution
- Manage team operations including **workload planning, task allocation, and resourcing** across concurrent multi-LOB product tracks

Key initiatives & impact:

• Unified Submissions & Underwriting Workbench Architecture

Architected a single reusable base user journey (submission → quote → bind) applicable across all LOBs and client configurations — eliminating the need to design or build from scratch per engagement. Minor LOB-specific customizations replace full ground-up redesigns, with 5 LOBs now running on the same base system and 0 full redesigns needed for each new line of business.

Outcome: 92% reduction in manual submission work (from half a day per submission to minutes); 2.5× more submissions processed per underwriter per day with the same headcount.

• Enterprise Design System Overhaul (0→1 Re-platform)

Diagnosed root cause of platform fragmentation — siloed designers working with separate PMs across LOBs had produced inconsistent UI patterns and duplicate dev component libraries, inflating engineering cost and time. Led a phased 0→1 rebuild across 3 phases, allocated team workstreams, secured leadership approval on sample screens, and ran structured engineering handover. Established cross-functional governance preventing unauthorized UI drift.

Outcome: 85% reduction in manual systems — from 5+ fragmented tools to one unified workspace; consistent product experience across all LOBs for the first time in the company's history.

• Hypothesis-Driven DesignOps — "Design Panorama"

Conceived and launched bi-weekly alignment sessions to institutionalize continuous design review, break down cross product silos, and eliminate redundant work. Mapped an internal AI-utilization roadmap to automate repetitive UI tasks across the team.

Outcome: Reduced revision cycles by 20%, freeing 4–6 hours per designer per week for strategic research and problem-solving.

EDUCATION

MBA (2016)
East West College of Management

BBM (2014)
Seshadripuram Institute of Commerce & Management

CERTIFICATIONS

UX Designer (2019)
Aspire Gate, Bengaluru

Generative AI Mastermind (2026)
Outskill

CREATIVE LEADERSHIP

Suryavansh Creations
Founder · Creative Director

Independent creative studio producing short films, documentaries, and cultural storytelling content — including KathaRatha, a dedicated Kannada-language scripture storytelling brand (YouTube & Instagram) covering Puranas, Ramayana, Mahabharata, and Vedic traditions.

- Founded and operate a creative brand entirely end-to-end — from creative direction, production, and narrative architecture through audience growth and distribution strategy
- Applies the same user-centered, narrative-driven thinking from enterprise product design to audience-facing content — building distinct content identities for different audience segments

PROFESSIONAL EXPERIENCE (Continued)

UX Designer at CoreValue Technologies Oct 2020 – Jun 2023

- Owned **end-to-end product design** across multiple live products in IoT, Insurance, E-commerce, and corporate web — managing full design lifecycle from discovery to delivery
- Managed **direct client relationships across India, UK, and US markets** — leading requirements gathering, product ideation, design sessions, and usability testing end-to-end
- Collaborated with development teams on post-handoff integration and with product teams on **pre-delivery QA testing** before every client release
- Designed **complete end-to-end design systems** solo for client products — defining color, typography, component architecture, and full visual language, then securing sign-off from client leadership
- Built and scaled team design capability by **mentoring designers from ground up** — from initial task allocation and review through to independent full-project ownership with final oversight

UI Designer at LocalCube Commerce Pvt Ltd (StoreKing) May 2019 – Oct 2020

Talent Acquisition Executive at TalentXO (Formerly CrewKarma) May 2019 – Oct 2020

INDEPENDENT PROJECTS

Spendly (Live Web Application) 2026
Founder · Product Designer · Builder

Personal finance PWA designed, built, and deployed entirely solo — from UX concept through to live production using AI-assisted development. Demonstrates the full design-to-deployment loop closed by a single person with 72% user retention among daily active users.

- Owned the entire product lifecycle — service design, UX architecture, UI, build, and deployment — with full accountability for every product decision and zero handoff dependency
- Designed a proprietary 3-label "financial wisdom" classification system (Necessary / Manageable / Unnecessary) to reframe spending behaviour without traditional budgeting friction
- Built a "Money Leaks" diagnostic dashboard surfacing wasteful spending patterns, paired with a 10-second logging flow engineered to eliminate the #1 drop-off point in finance apps
- Compressed the traditional design-to-dev timeline by independently shipping a production-grade application using Claude, Lovable, and Supabase — without an engineering team

NutBite Store Manager (Web Application - in Phase 1) 2026
Freelance Product Designer · Builder

Mobile-first retail operations platform designed and built solo for a cashew retail business — inbound client engagement generated directly by Spendly, proving real-world product credibility. MVP shipped and in active use.

- Digitized the client's entire day-to-day retail operations — replacing manual/offline processes with a structured digital workflow covering Dashboard, Product Catalog, Inventory, Sales, and Reporting
- Ran solo end-to-end product delivery — requirements gathering with client, UX architecture, UI design, and full build with no intermediary product or engineering team
- Designed a mobile-first interface for a non-technical retail operator — prioritizing speed and simplicity for high-frequency daily in-store use over feature density
- Shipped MVP using AI-assisted development tools (Claude, Lovable, Supabase), enabling solo delivery of a multi-screen production application on a compressed freelance timeline
